The LED Fraud

Dear Christopher Kavanaugh, US Attorney, Western District of Virginia,

I am watching the Hulu series Dopesick about the OxyContin fraud. My research led me to former US Attorney Rick Mountcastle as the person who led the investigation into Purdue Pharma. The reason I am contacting you is because the Soft Lights Foundation has uncovered a similar large-scale fraud by the LED cartel.

The LED cartel claims that LEDs "save energy". This claim is the entire reason that billions and billions of dollars have been spent switching from incandescent and High-Pressure Sodium lights to LEDs. And yet that claim is entirely fraudulent. The claim is not true and the LED cartel, including the Illuminating Engineering Society, Duke Energy, National Grid, Philips, Acuity Brands, and even the International Dark Sky Association and National Resources Defense Council have pushed this fraud on Americans, and now we are all getting sick.

The photo below shows New Orleans, Louisiana as viewed from above in January, 2022. That sickly white color and glare is from LED light beams which are toxic, hazardous, and discriminatory. Just like Purdue Pharma claimed that OxyContin was non-addictive, the IES and its funders in the LED lighting industry have fraudulently claimed that LEDs save energy, are safe, and are not discriminatory.

The Soft Lights Foundation has been researching this issue for 5 years. We did not know that the switch to LEDs was a fraud when we started, but we now know with certainty that the entire switch to LEDs is entirely a scam.

The photo below is of a funeral home in Miami using LED devices. As you can see in the photo, the light is hideous, and in fact it is so toxic, it causes seizures, migraines, and other severe neurological reactions. The LED light beams are a type of electromagnetic radiation never before seen in human history and the LED cartel is fully aware of how dangerous this EM radiation is.

The IES is already beginning a propaganda campaign to portray themselves as not a part of this fraud, but we can assure you that the IES is a key player, acting as the front group for the entire LED industry's fraud. IES recently sent me this propaganda video they made after the Soft Lights Foundation contacted them: <https://youtu.be/QajmPwQjLAM>

We are requesting an investigation. If this was simply a public health issue, we would not be contacting your office. But this is a massive, well-orchestrated fraud, and therefore your office is the appropriate starting point. We have a significant amount of material that will help you prove the fraud, some of which is posted on our website: www.softlights.org/led-fraud

Please contact me.

Sincerely,

Mark Baker
President
Soft Lights Foundation
