LED Radiation

Dear Starship Legal Department,

Spatially heterogeneous LED radiation is currently unregulated by the government, but has been shown to cause epileptic seizures, migraines, psychological trauma, eye damage, and thoughts of suicide. The use of LEDs on mobile robots endangers the lives of the public and violates the Americans with Disabilities Act.

To protect your new business from liability, the LED lights must be eliminated from the robots in order to protect the health and safety of humans.

This letter will be posted publicly on our website at www.softlights.org.

Sincerely,

Mark Baker
President
Soft Lights Foundation
