

April 2025

<https://www.change.org/p/u-s-dot-ban-blinding-headlights-and-save-lives/c>

4/27/2025	"Most nights when I'm driving home it's impossible to see the road, so I need to line up my car with the oncoming traffic's movement. This needs to change or people like me (with poor vision) will eventually be unable to even do this indirect half-solution."
4/27/2025	"I'm a healthy 28 year old with 20/20 vision and I am now too scared to drive at night most of the time due to the new LED headlights. I have had so many near misses driving in rural places with no overhead streetlights where the LED lights on oncoming cars are completely blinding. Sometimes the lights trigger a cluster headache or migraine for me and I have to pull over. I am a Masters of Public Health student and I thoroughly believe these headlights not only pose serious safety risks as they increase the likelihood of car accidents, but they also cause long term eye damage. We need to get rid of them!"
4/25/2025	"As more and more sources of blue light become our everyday I have noticed my eyes deteriorating faster. I was recently diagnosed with an astigmatism in both eyes. These headlights make the difficulty of driving at night almost impossible. I am terrified to drive anywhere unfamiliar once it gets dark now as these LED lights are sometime so blinding I can't even see past the car, let alone my windshield. My head aches and they even make me nauseous. I have said for years that they are out of control, but now it seems they are worse than ever. After reading the extensive history of trying to fight this and how illegal it has been the whole time infuriates me. I rarely do things like this, but people are dying from this and I have had enough."
4/24/2025	"Some of the issues presented are quite valuable and need much support. I am sorry not to be able to donate due to every time I put a credit card into any Computer it has been immediately hacked and I have had a really bad time contesting the phony charges which prevent the legitimate charges to be paid."
4/24/2025	"Lumens, Beam Angle, Beam spread, Headlight mounting height -- none of these seem to be regulated or uniform! I drive a small car, not a high SUV or truck, and the oncoming car headlight beam often shines directly in my eyes making the overly bright lights even worse! It is as if drivers are using their high-beams (and maybe they are!) I now try to avoid driving at night or use my spouse's higher-clearance car, a slight improvement, but still -- for a fatal split second -- wouldn't be able to see a pedestrian in a crosswalk directly in front of me! It is terrifying!"
4/22/2025	"I can't count the number of times I have been terrified for my life and for the lives of those around me because a pair of excessively bright headlights has rendered me essentially blind, especially for small things like lane markers - or worse, pedestrians. Sometimes the lights are in front of me, sometimes behind me shining at my side mirrors. I try to slow down as much as possible until I can see again, but lights can strike very suddenly, and there are many situations when one can't slam on the brakes without danger. (The middle of intersections, a fast-moving highway with cars tailgating you, and many more!) Adding to that, I get migraines from excessively bright lights. (Note that older or yellower headlights do not cause this issue!) This both means that I want to look away to protect myself (but I still need to see!) and means that in the event of a migraine there are still more reasons it makes driving dangerous. Auras obscure my vision, my thoughts become cloudy, and my reaction time slows. (In that case, of course I try to stop driving until it passes, but again, one can't do that instantly.) So far, I haven't gotten in any accidents, but there sure have been close calls, all due entirely to overly bright lights! I can't think of anything else which has put me in so much danger."

4/19/2025	"I am now on migraine medicine everyday because of these headlights and porchlights, which only helps slightly. They are literally killing me."
4/16/2025	"I drive everyday for school and work. I get off late at night usually and most of the times I have to take side roads. I always have to adjust my eyes to see in the dark which is easy and not usually a problem, until some car crosses my path with the sun for headlights. This is when I have to turn to look at the side of the road which can be dangerous and very unsafe, however this is still better than getting blinded for a few seconds. I have also noticed the positioning of the lights is at the perfect angle and gets both side mirrors and my rearview mirror so I really am getting blinded from all directions."
4/16/2025	"Driving at night has become increasingly painful for my eyes and dangerous because i have to avert my eyes from the road to avoid the glare. This should have never been allowed."
4/15/2025	"An AARP article maintained there is no difference in the brightness of vehicle headlights. Causes me to be skeptical of their automobile reviews. Or, maybe they aren't testing in real-world conditions. See John Draneas article in Feb 25 Sports Car Market."
4/13/2025	"I find the new headlights dangerously blinding. In a rural area it's not only oncoming, it's also being blazingly lit from behind making it impossible to see out of the windshield."
4/13/2025	"These led lights are abviously way too bright. It shows how only one person cares about himself and not others. They are blinding even on low beam. Ill have to slow down to 30mph depending on location to let the go by. It is not safe!"
4/13/2025	"I have to have my sun glasses on to oncoming traffic"
4/12/2025	"My husband and I both have issues with the LED headlights. I had someone behind me that has them and it took up my entire side mirror. They hurt my eyes. If somebody is blinking because of the brightness then. that means they're not able to watch the road properly. It's dangerous. There are times that I will see someone crossing the street, but then another vehicle with bright lights will come up and I can't see them anymore. Can you imagine having to deal with that when there's too close to tell that there's someone there?"
4/12/2025	"The headlights are ridiculous and dangerous to oncoming drivers. I drive for a living. Something needs to change. What good does it do to help one driver see better while blinding another. It looks like everyone is driving with there high beams on now. DANGEROUS!"
4/12/2025	"These new headlights are not at all safe, they blind oncoming traffic and can cause accidents. Please do not continue to install in any cars and recall all the existing ones !!"
4/11/2025	"Cannot stand when one of these SUVs with insanely bright lights is behind me. Was happy to see this petition to immediately sign. They light up the inside of my car like high beams! I often try to turn my side mirror far enough hoping it's beaming the light back into their own freakin eyeball- not to cause a wreck of course- but they've gotta see for themselves how bright their dumb headlights are! Someone's gotta make legislation limiting the bulbs!!!"
4/11/2025	"{"videoUrl":"https://customer-g2wndu9j9b1p498o.cloudflarestream.com/16d1cf102da02c80f377a9d03c3915da/downloads/default.mp4","cloudflareUid":"16d1cf102da02c80f377a9d03c3915da"}"
4/10/2025	"I was hit by a driver who stated that she was blinded by bright LED headlights. Luckily I survived but this issue is life and death"
4/10/2025	"I work nights and driving to and from work is becoming more of a challenge due to these lights! Plus it does not help when inconsiderate people do not turn off their bright lights, which are their LED bright lights. Worse invention ever for vehicles in my opinion, need to get rid of them."
4/10/2025	"BC needs regulations on maximum intensity of headlight power intensity, as the Motor Vehicle Act Regulations formerly provided. Currently Section 4.06, 1b and 5 address "striking the eye of

	an oncoming driver" with no mention of actual candle-power of low-beam & prohibited high-beam. Exact maximum intensity power maximums are badly needed currently. Thank you"
4/10/2025	"I drive every night from doylestown pa to Philadelphia, and i have to suffer this problem every night. Very rude and dangerous."
4/9/2025	"I thought my eyes had suddenly aged. Turns out, there has been an increase in LED headlights that coincided with an increase in my nighttime driving. The headlights are awful"
4/9/2025	"I used to be able to drive at night and not worry about it too much. The worst that could happen was some other driver leaving their brights on. These days any long trip in the dark is a recipe for migraines and it's entirely due to the intensity and location of modern vehicle lights. I think LEDs are a great technology, but like anything else, they have to be used in a reasonable way."
4/9/2025	"It is very hard to drive now days because of the intense brightness of head light and all most to the point of being blinded and driving 70 and not knowing where you are on the road until a car passes, and praying nothing is in front of you and your still on the road until your sight comes back to you. My mirrors are not where the should be for traffic behind me for the same reason. Instead of blinding lights, inhance to paint or marker on the roads. Rain is the worst when the lines are not visible and glaring headlights are beaming. A person driving a car has no hope."
4/9/2025	"Like so many others, I too thought I was only one being blinded by car headlights in the recent years! It's literally become painful to drive at night, from experiencing headaches to losing vision on the road, I am completely on board to banning blinding headlights!"
4/9/2025	"Has anyone ever thought about the seniors with cataracts and the effect these headlights hv on glare. It's very blinding and look how many senior citizens we have. There are no lines to guide you on side streets and frontal impact wrecks are the most deadly!"
4/9/2025	"Does the insurance institute and NHTSA take into account seniors driving on the roads who have cataracts? And how many seniors drive? Frontal impact crashes happen because it's hard to stay on your side of the road when passing car when night blindness from LEDs compound the problem. Do a study on frontal impact wrecks on side streets with no lines and seniors driving. We all aren't young anymore"
4/9/2025	"This LED headlights madness needs to stop and become properly regulated. They're a road hazard, no doubt about it. They're damaging our driving, our eyes and safety of everyone involved. Now the old cars Install the LEDs and then it's even worse. We used to be able to see if the car coming your way is moving slightly towards you and might hit you, so that you can avoid, but now it's just you can't even look at the corner of the car to get a sense of its direction. You just look away and pray all goes well."
4/9/2025	"This LED headlights madness needs to stop and become properly regulated. They're a road hazard, no doubt about it. They're damaging our driving, our eyes and safety of everyone involved. Now the old cars Install the LEDs and then it's even worse. We used to be able to see if the car coming your way is moving slightly towards you and might hit you, so that you can avoid, but now it's just you can't even look at the corner of the car to get a sense of its direction. You just look away and pray all goes well."
4/8/2025	"I have experienced the torture of the headlights being so bright and couldn't drive for a day. My eyes needed to rest after being on the road for a week straight with breaks in between. When I saw this article it all made sense. I pray that this gets to the floor and change happens. It's not making traveling better. It's making it worse. Drivers can't see if it's safe to get in the next lane because of these blinding lights. It's really bad especially on highway 95 on the east corridor line."
4/8/2025	"I get blinded by car drivers all the time. Often it seems they have their high beams on, but whe I flash them to remind them to turn their high beams off, they flash back with even brighter lights. Night vision is completely destroyed"

4/8/2025	"I can no longer drive at night because of the intensity of headlights. Please begin regulation of headlight strength to a lower level!"
4/8/2025	"Unmentioned issue: The problem is exacerbated for those suffering from cataracts!!"
4/8/2025	"Please limit the car lights & save our eyes"
4/8/2025	"We need safety regulations! Monster SUV and trucks seem to be the worst offenders."
4/8/2025	"I find that the new brightness of headlights feels blinding and irritating. How is that helpful and qualify as higher safety standards? It may help the driver but what about the other drivers that are squinting or having to look away because their eyes are blinded. In my opinion, a driver who is blinded is being handicapped by the light intensity and should anything happen as a result, perhaps a lawyer should be consulted."
4/8/2025	"It appears that pickup. Trucks and SUVs that are installing larger tires and lift kits are doing so without verifying that their headlights are aimed correctly. This lack of consideration for on coming drivers is blinding drivers. It should be mandatory that when a vehicle has modifications from their stock configuration that a headlight aim be checked by an authorized third party."
4/8/2025	"Sometimes, when a vehicle has bright headlights, approaching from behind, I need to pull over & let the vehicle pass. Additionally, I have my rear window tinted."
4/8/2025	"Other drivers and pedestrians are blinded by too bright headlights. To save lives, NHTSA needs to address this dangerous situation immediately."
4/8/2025	"I can't drive on high-speed roads at night anymore....too dangerous, especially with enormous SUVs and pickups beaming light into my brain from above my smaller car. The reflected light in my rear-view mirror is so blinding I have to avert the mirror to drive at all! The light is AGGRESSIVE and DANGEROUS"
4/8/2025	"The bright lights are dangerous and it's not acceptable."
4/6/2025	" https://www.vox.com/explain-it-to-me/407147/bright-car-headlights-leds "
4/6/2025	"The new headlights make it so unnerving to drive at night, especially for those of us with astigmatism. Like who in the heck was the "genius" that thought making head lights brighter was going to help things? Its obvious to me that no one consulted and sort of optomestrist, opthomologist or any sort of vision professional. we need to go back to the old school headlights now!"
4/5/2025	"Overly bright lights at night are a dangerous issue that must be addressed. Sometimes I can see my own car's shadow in front of me, even though my own lights are on, because the lights behind me are so bright."
4/5/2025	"The incredibly disorienting bright white glare from LED lights on large snowflakes at night on a dark snowy road is most certainly dangerous. Who researched the level of LED safety in the snow??? This is an absolute must."
4/5/2025	"The worst offenders are cheap aftermarket replacement headlights and light bars. Existing rules on forward facing lights need to be enforced, and limits need to be clarified to address new technology. Nobody wants to see endlessly increasing regulation, but headlight brightness has become an arms race that puts pedestrians and other drivers at risk in order to turn the night into daylight."
4/5/2025	"Blinding LED and blue headlamps are DANGEROUS."
4/5/2025	"{"videoUrl":" https://customer-g2wndu9j9b1p498o.cloudflarestream.com/005742ac6909f14920e3f0e26ff8d426/downloads/default.mp4 ","cloudflareUid":"005742ac6909f14920e3f0e26ff8d426"}"
4/5/2025	"If they are really concerned with our safety they'd get rid of those blinding lights. I've even seen them a bright yellow!! Enough."

4/3/2025	"I live in an area with a lot of sharp turns, hills, and ditches. It's extremely easy to run off the road even without being blinded by LEDs. At night, and especially when it rains, LED lights make it nearly impossible to see the yellow and white, because EVERYTHING turns white. If you went back a few years and used LEDs on the road, people would tell you to turn your brights off. These lights have made it is unnecessarily dangerous to drive at night, and I've nearly run off the road multiple times after being flashbanged"
4/1/2025	"I get frequent migraines and these lights are a trigger. I have to move my mirrors everytime a vehicle is behind me, blinding me with these lights. It's a safety hazard because my mirrors are all out of place and I can't keep adjusting them back and forth while driving. PLEASE GET RID OF THEM!!"
4/1/2025	"Headlines have become so bright these days that I am having to drive one-handed during night time. My left hand covers my eyes from glare in the rear view mirror and from oncoming traffic. Worse yet, I drive a Prius and headlights from tall vehicles literally illuminate my cabin. Legislators please act. To my fellow drivers with bright lights: I want to see the road and be safe too."
4/27/2025	"Most nights when I'm driving home it's impossible to see the road, so I need to line up my car with the oncoming traffic's movement. This needs to change or people like me (with poor vision) will eventually be unable to even do this indirect half-solution."
4/27/2025	"I'm a healthy 28 year old with 20/20 vision and I am now too scared to drive at night most of the time due to the new LED headlights. I have had so many near misses driving in rural places with no overhead streetlights where the LED lights on oncoming cars are completely blinding. Sometimes the lights trigger a cluster headache or migraine for me and I have to pull over. I am a Masters of Public Health student and I thoroughly believe these headlights not only pose serious safety risks as they increase the likelihood of car accidents, but they also cause long term eye damage. We need to get rid of them!"
4/25/2025	"As more and more sources of blue light become our everyday I have noticed my eyes deteriorating faster. I was recently diagnosed with an astigmatism in both eyes. These headlights make the difficulty of driving at night almost impossible. I am terrified to drive anywhere unfamiliar once it gets dark now as these LED lights are sometime so blinding I can't even see past the car, let alone my windshield. My head aches and they even make me nauseous. I have said for years that they are out of control, but now it seems they are worse than ever. After reading the extensive history of trying to fight this and how illegal it has been the whole time infuriates me. I rarely do things like this, but people are dying from this and I have had enough."
4/24/2025	"Some of the issues presented are quite valuable and need much support. I am sorry not to be able to donate due to every time I put a credit card into any Computer it has been immediately hacked and I have had a really bad time contesting the phony charges which prevent the legitimate charges to be paid."
4/24/2025	"Lumens, Beam Angle, Beam spread, Headlight mounting height -- none of these seem to be regulated or uniform! I drive a small car, not a high SUV or truck, and the oncoming car headlight beam often shines directly in my eyes making the overly bright lights even worse! It is as if drivers are using their high-beams (and maybe they are!) I now try to avoid driving at night or use my spouse's higher-clearance car, a slight improvement, but still -- for a fatal split second -- wouldn't be able to see a pedestrian in a crosswalk directly in front of me! It is terrifying!"
4/22/2025	"I can't count the number of times I have been terrified for my life and for the lives of those around me because a pair of excessively bright headlights has rendered me essentially blind, especially for small things like lane markers - or worse, pedestrians. Sometimes the lights are in front of me, sometimes behind me shining at my side mirrors. I try to slow down as much as possible until I

	can see again, but lights can strike very suddenly, and there are many situations when one can't slam on the brakes without danger. (The middle of intersections, a fast-moving highway with cars tailgating you, and many more!) Adding to that, I get migraines from excessively bright lights. (Note that older or yellower headlights do not cause this issue!) This both means that I want to look away to protect myself (but I still need to see!) and means that in the event of a migraine there are still more reasons it makes driving dangerous. Auras obscure my vision, my thoughts become cloudy, and my reaction time slows. (In that case, of course I try to stop driving until it passes, but again, one can't do that instantly.) So far, I haven't gotten in any accidents, but there sure have been close calls, all due entirely to overly bright lights! I can't think of anything else which has put me in so much danger."
4/19/2025	"I am now on migraine medicine everyday because of these headlights and porchlights, which only helps slightly. They are literally killing me."
4/16/2025	"I drive everyday for school and work. I get off late at night usually and most of the times I have to take side roads. I always have to adjust my eyes to see in the dark which is easy and not usually a problem, until some car crosses my path with the sun for headlights. This is when I have to turn to look at the side of the road which can be dangerous and very unsafe, however this is still better than getting blinded for a few seconds. I have also noticed the positioning of the lights is at the perfect angle and gets both side mirrors and my rearview mirror so I really am getting blinded from all directions."
4/16/2025	"Driving at night has become increasingly painful for my eyes and dangerous because i have to avert my eyes from the road to avoid the glare. This should have never been allowed."
4/15/2025	"An AARP article maintained there is no difference in the brightness of vehicle headlights. Causes me to be skeptical of their automobile reviews. Or, maybe they aren't testing in real-world conditions. See John Draneas article in Feb 25 Sports Car Market."
4/13/2025	"I find the new headlights dangerously blinding. In a rural area it's not only oncoming, it's also being blazingly lit from behind making it impossible to see out of the windshield."
4/13/2025	"These led lights are abviously way too bright. It shows how only one person cares about himself and not others. They are blinding even on low beam. Ill have to slow down to 30mph depending on location to let the go by. It is not safe!"
4/13/2025	"I have to have my sun glasses on to oncoming traffic"
4/12/2025	"My husband and I both have issues with the LED headlights. I had someone behind me that has them and it took up my entire side mirror. They hurt my eyes. If somebody is blinking because of the brightness then. that means they're not able to watch the road properly. It's dangerous. 4/6/2025	" https://www.vox.com/explain-it-to-me/407147/bright-car-headlights-leds "
4/6/2025	"The new headlights make it so unnerving to drive at night, especially for those of us with astigmatism. Like who in the heck was the "genius" that thought making head lights brighter was going to help things? Its obvious to me that no one consulted and sort of optometrist, ophthalmologist or any sort of vision professional. we need to go back to the old school headlights now!"
4/5/2025	"Overly bright lights at night are a dangerous issue that must be addressed. Sometimes I can see my own car's shadow in front of me, even though my own lights are on, because the lights behind me are so bright."
4/5/2025	"The incredibly disorienting bright white glare from LED lights on large snowflakes at night on a dark snowy road is most certainly dangerous. Who researched the level of LED safety in the snow??? This is an absolute must."
4/5/2025	"The worst offenders are cheap aftermarket replacement headlights and light bars. Existing rules on forward facing lights need to be enforced, and limits need to be clarified to address new

	technology. Nobody wants to see endlessly increasing regulation, but headlight brightness has become an arms race that puts pedestrians and other drivers at risk in order to turn the night into daylight."
4/5/2025	"Blinding LED and blue headlamps are DANGEROUS."
4/5/2025	"{"videoUrl":"https://customer-g2wndu9j9b1p498o.cloudflarestream.com/005742ac6909f14920e3f0e26ff8d426/downloads/default.mp4","cloudflareUid":"005742ac6909f14920e3f0e26ff8d426"}"
4/5/2025	"If they are really concerned with our safety they'd get rid of those blinding lights. I've even seen them a bright yellow!! Enough."
4/3/2025	"I live in an area with a lot of sharp turns, hills, and ditches. It's extremely easy to run off the road even without being blinded by LEDs. At night, and especially when it rains, LED lights make it nearly impossible to see the yellow and white, because EVERYTHING turns white. If you went back a few years and used LEDs on the road, people would tell you to turn your brights off. These lights have made it is unnecessarily dangerous to drive at night, and I've nearly run off the road multiple times after being flashbanged"
4/1/2025	"I get frequent migraines and these lights are a trigger. I have to move my mirrors everytime a vehicle is behind me, blinding me with these lights. It's a safety hazard because my mirrors are all out of place and I can't keep adjusting them back and forth while driving. PLEASE GET RID OF THEM!!"
4/1/2025	"Headlines have become so bright these days that I am having to drive one-handed during night time. My left hand covers my eyes from glare in the rear view mirror and from oncoming traffic. Worse yet, I drive a Prius and headlights from tall vehicles literally illuminate my cabin. Legislators please act. To my fellow drivers with bright lights: I want to see the road and be safe too."
